

## burkert

A rotork Brand

Fine Controls have been supplying process controls & instrumentation equipment since 1994, & now serves an ever expanding customer base, both in the UK & globally.

We offer a full range of valve & instrumentation products & services, with our product rangerepresenting leading technologies & brands:

**Flow:** Flow Meters & Transmitters, Flow Switches, Flow Control Valves & Batch Control Systems

**Temperature:** Temperature Probes & Thermowells, Temperature ransmitters, Temperature Regulators & Temperature Displays

Level: Level Transmitters & Switches

**Pressure:** Pressure Gauges & Transmitters, Precision & High Pressure Regulators & I-P Converters, Volume boosters.

**Precision Pneumatics:** Pressure Regulators, I-P Converters, Volume Boosters, Vacuum Regulators

**Valves:** Solenoid & Pneumatic Valves, Control Valves & Positioners, Actuated Ball, Globe or Diaphragm Valves & Isolation Valves

**Services:** Repair, Calibration, Panel Build, System Design & Commissioning

### Safety instructions for Ex areas

Please note the Ex-specific safety information for installation and operation in Ex areas. These safety instructions are part of the operating instructions manual and come with the Ex-approved instruments. Editing status: 2014-03-31

### 1 About this document

### 1.1 Function

This operating instructions manual provides all the information you need for mounting, connection and setup as well as important instructions for maintenance and fault rectification. Please read this information before putting the instrument into operation and keep this manual accessible in the immediate vicinity of the device.

### 1.2 Target group

This operating instructions manual is directed to trained specialist personnel. The contents of this manual should be made available to these personnel and put into practice by them.

### 1.3 Symbols used

# 1

Information, tip, note

This symbol indicates helpful additional information.

Caution: If this warning is ignored, faults or malfunctions can result.

**Warning:** If this warning is ignored, injury to persons and/or serious damage to the instrument can result.

**Danger:** If this warning is ignored, serious injury to persons and/or destruction of the instrument can result.

### Ex applications

This symbol indicates special instructions for Ex applications.

List

The dot set in front indicates a list with no implied sequence.

→ Action

This arrow indicates a single action.

1 Sequence of actions

Numbers set in front indicate successive steps in a procedure.

### Battery disposal

This symbol indicates special information about the disposal of batteries and accumulators.

### 2 For your safety

### 2.1 Authorised personnel

All operations described in this operating instructions manual must be carried out only by trained specialist personnel authorised by the plant operator.

During work on and with the device the required personal protective equipment must always be worn.

### 2.2 Appropriate use

LEVEL TRANSMITTER 8189 is a sensor for continuous level measurement.

You can find detailed information about the area of application in chapter "*Product description*".

Operational reliability is ensured only if the instrument is properly used according to the specifications in the operating instructions manual as well as possible supplementary instructions.

### 2.3 Warning about incorrect use

Inappropriate or incorrect use of the instrument can give rise to application-specific hazards, e.g. vessel overfill or damage to system components through incorrect mounting or adjustment.

### 2.4 General safety instructions

This is a state-of-the-art instrument complying with all prevailing regulations and guidelines. The instrument must only be operated in a technically flawless and reliable condition. The operator is responsible for the trouble-free operation of the instrument.

During the entire duration of use, the user is obliged to determine the compliance of the necessary occupational safety measures with the current valid rules and regulations and also take note of new regulations.

The safety instructions in this operating instructions manual, the national installation standards as well as the valid safety regulations and accident prevention rules must be observed by the user.

For safety and warranty reasons, any invasive work on the device beyond that described in the operating instructions manual may be carried out only by personnel authorised by the manufacturer. Arbitrary conversions or modifications are explicitly forbidden.

The safety approval markings and safety tips on the device must also be observed.

### 2.5 CE conformity

The device fulfills the legal requirements of the applicable EC guidelines. By affixing the CE marking, we confirm successful testing of the product.

### Electromagnetic compatibility

Instruments in four-wire or Ex-d-ia version are designed for use in an industrial environment. Nevertheless, electromagnetic interference from electrical conductors and radiated emissions must be taken into account, as is usual with class A instruments according to EN 61326-1. If the instrument is used in a different environment, the electromagnetic compatibility to other instruments must be ensured by suitable measures.

### 2.6 NAMUR recommendations

NAMUR is the automation technology user association in the process industry in Germany. The published NAMUR recommendations are accepted as the standard in field instrumentation.

The device fulfills the requirements of the following NAMUR recommendations:

- NE 21 Electromagnetic compatibility of equipment
- NE 43 Signal level for malfunction information from measuring transducers
- NE 53 Compatibility of field devices and display/adjustment components
- NE 107 Self-monitoring and diagnosis of field devices

For further information see www.namur.de.

2016 T⊈pe label MAN 1000244889 EN Version: - Status: RL (released | freigegeben) printed: 24.

46223-EN-140605

#### 3 Product description

#### 3.1 Configuration

The type label contains the most important data for identification and use of the instrument:

tinded: 24,10,2016 Application area Generational principle -MAN 1000244889 EN Version: - Status: RL (released

- Operating instructions manual "Display and adjustment module" (optional)
- Ex-specific "Safety instructions" (with Ex versions)
- if necessary, further certificates

### 3.2 Principle of operation

The LEVEL TRANSMITTER 8189 is a level sensor with polished rod probe for continuous level or interface measurement, particularly suitable for applications in the food processing and pharmaceutical industry.

Optionally an autoclaved version with separable housing is available.

High frequency microwave pulses are guided along a steel cable or a rod. Upon reaching the product surface, the microwave pulses are reflected. The running time is evaluated by the instrument and outputted as level.

Fig. 2: Level measurement

- 1 Sensor reference plane (seal surface of the process fitting)
- d Distance to the interface (HART value 1)
- h Height Level

### Probe end tracking

To increase sensitivity, the probe is equipped with probe end tracking. In products with a low dielectric constant, this function is very helpful. This is the case, for example, in plastic granules, packing chips or in vessels with fluidized products.

Between a dielectric constant of 1.5 and 3, the function switches on, if required. As soon as the level echo can no longer be detected, probe end tracking is automatically activated. The measurement is continued with the last calculated dielectric constant.

The accuracy thus depends on the stability of the dielectric constant.

If you measure a medium with a dielectric constant below 1.5, probe end tracking is always active. In this case, you have to enter the

### burkert

ശ

dielectric constant of the medium. A stable dielectric constant is very important here.

High frequency microwave impulses are guided along a steel cable or rod. Upon reaching the product surface, a part of the microwave impulses is reflected. The other part passes through the upper product and is reflected by the interface. The running times to the two product layers are processed by the instrument.

Fig. 3: Interface measurement

- 1 Sensor reference plane (seal surface of the process fitting)
- d1 Distance to the interface (HART value 1)
- d2 Distance to the level (HART value 3)
- TS Thickness of the upper medium (d1 d2)
- h1 Height Interface
- h2 Height Level
- L1 Lower medium
- L2 Upper medium
- L3 Gas phase

### Upper medium (L2)

- The upper medium must not be conductive
  - The dielectric constant of the upper medium or the actual distance to the interface must be known (input required). Min. dielectric constant: 1.6.
  - The composition of the upper medium must be stable, no varying products or mixtures
  - The upper medium must be homogeneous, no stratifications within the medium
  - Min. thickness of the upper medium 50 mm (1.97 in)
  - Clear separation from the lower medium, emulsion phase or detritus layer max. 50 mm (1.97 in)
  - If possible, no foam on the surface

### Lower medium (L1)

• The dielectric constant must be 10 higher than the dielectric constant of the upper medium, preferably electrically conductive.

~

Example: upper medium dielectric constant 2, lower medium at least dielectric constant 12.

| freig   | This applies particularly to:   |
| L (released   | <ul> <li>Outdoor mounting</li> <li>Installations in areas where high humidity is expected (e.g. through cleaning processes)</li> <li>Installations on cooled or heated vessels</li> </ul>   |
| EX<br>Protective caps<br>Station: -   | In the case of instrument housings with self-sealing NPT threads, it is<br>not possible to have the cable entries screwed in at the factory. The<br>openings for the cable glands are therefore covered with red protec-<br>tive caps as transport protection.                    |
| EN Version  | Prior to setup you have to replace these protective caps with approved cable glands or close the openings with suitable blind plugs.<br>The suitable cable glands and blind plugs come with the instrument.   |
| Suitability for the process   | Make sure that all parts of the instrument exposed to the process are suitable for the existing process conditions.   |
| 202   | These are mainly:   |
| Conditions  | <ul><li>Active measuring component</li><li>Process fitting</li><li>Process seal</li></ul>   |
|   | Process conditions are particularly:  |
|   | <ul> <li>Process pressure</li> <li>Process temperature</li> <li>Chemical properties of the medium</li> <li>Abrasion and mechanical influences</li> </ul>  |
|   | You can find the specifications of the process conditions in chapter " <i>Technical data</i> " as well as on the type label.  |
| Installation position   | <b>4.2 Mounting instructions</b><br>Mount LEVEL TRANSMITTER 8189 in such a way that the distance<br>to vessel installations or to the vessel wall is at least 300 mm (12 in).<br>In non-metallic vessels, the distance to the vessel wall should be at<br>least 500 mm (19.7 in). |
|   | During operation, the probe must not touch any installations or the vessel wall. If necessary, fasten the probe end.  |

In vessels with conical bottom it can be advantageous to mount the sensor in the center of the vessel, as measurement is then possible nearly down to the lowest point of the bottom. Keep in mind that measurement all the way down to the tip of the probe may not be possible. The exact value of the min. distance (lower dead band) is stated in chapter "Technical data".

Fig. 4: Vessel with conical bottom

#### Plastic vessel/Glass vessel

The guided microwave principle requires a metallic surface on the process fitting. Therefore, in plastic vessels, etc., use an instrument version with flange (from DN 50) or place a metal sheet  $(\phi > 200 \text{ mm/8 in})$  beneath the process fitting when screwing it in.

Make sure that the plate has direct contact with the process fitting.

When installing rod or cable probes in vessels without metal walls, e.g. in plastic vessels, the measured value can be influenced by strong electromagnetic fields (emitted interference according to EN 61326: class A). In this case, use a probe with coaxial version.

burkert

46223-EN-140605

Fig. 5: Installation in non-metallic vessel

- 1 Flange
- 2 Metal sheet

If possible, avoid sockets. Mount the sensor flush with the vessel top. If this is not possible, use short sockets with small diameter.

Higher sockets or sockets with a bigger diameter can generally be used. They can, however, increase the upper blocking distance (dead band). Check if this is relevant for your measurement.

In such cases, always carry out a false signal suppression after installation. You can find further information under "*Setup procedure*".

Fig. 6: Mounting socket

When welding the socket, make sure that the socket is flush with the vessel top.

### burkert

RL (released | freigegeben) printed: 24.10.2016

MAN 1000244889 EN

Welding work

Inversion in the second second

Fig. 7: Socket must be installed flush

- 1 Unfavourable installation
- 2 Socket flush optimum installation

Before beginning the welding work, remove the electronics module from the sensor. By doing this, you avoid damage to the electronics through inductive coupling.

Do not mount the instruments in or above the filling stream. Make sure that you detect the product surface, not the inflowing product.

Fig. 8: Mounting of the sensor with inflowing medium

Measuring range

The reference plane for the measuring range of the sensors is the sealing surface of the thread or flange.

Keep in mind that a min. distance must be maintained below the reference plane and possibly also at the end of the probe - measurement in these areas is not possible (dead band). The length of the cable can be used all the way to the end only when measuring conductive

46223-EN-140605

| 2016   | products. These blocking distances for different mediums are listed<br>in chapter " <i>Technical data</i> ". Keep in mind for the adjustment that the<br>default setting for the measuring range refers to water.            |
|--|--|
| Pressure   | The process fitting must be sealed if there is gauge or low pressure in the vessel. Before use, check if the seal material is resistant against the measured product and the process temperature.                            |
| 1) print   | The max. permissible pressure is specified in chapter " <i>Technical data</i> " or on the type label of the sensor.  |

| 16   | E.1. Dreparing the connection  |
|--|--|
| 50   | 5.1 Preparing the connection   |
| Seriety Instructions   | Always keep in mind the following safety instructions:   |
| printed: 24  | <ul> <li>Connect only in the complete absence of line voltage</li> <li>If overvoltage surges are expected, overvoltage arresters should<br/>be installed</li> </ul>  |
| Veltage supply   | Power supply and current signal are carried on the same two-wire cable. The operating voltage can differ depending on the instrument version.  |
| freiç  | The data for power supply are specified in chapter "Technical data".   |
| . ased   | Provide a reliable separation between the supply circuit and the mains circuits according to DIN EN 61140 VDE 0140-1.  |
| - (relea   | Keep in mind the following additional factors that influence the operat-<br>ing voltage:   |
| Status: RI   | <ul> <li>Lower output voltage of the power supply unit under nominal load<br/>(e.g. with a sensor current of 20.5 mA or 22 mA in case of fault)</li> <li>Influence of additional instruments in the circuit (see load values in<br/>chapter "<i>Technical data</i>")</li> </ul>  |
| MAN 1000244889 EN Vergon: - Status: RL (released   freigegebebe<br>Status 24.122<br>Contect: 24.122<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Contection<br>Conte | The instrument is connected with standard two-wire cable without screen. If electromagnetic interference is expected which is above the test values of EN 61326-1 for industrial areas, screened cable should be used.   |
| 44889  | We generally recommend the use of screened cable for HART multi-<br>drop mode.   |
| AAN 10002  | Use cable with round cross section for instruments with housing and cable gland. To ensure the seal effect of the cable gland (IP protection rating), find out which cable outer diameter the cable gland is suitable for.   |
| 2  | Use a cable gland fitting the cable diameter.  |
| Cable gland 1/2 NPT  | With plastic housing, the NPT cable gland or the Conduit steel tube must be screwed without grease into the threaded insert.   |
|  | Max. torque for all housings see chapter "Technical data".   |
| Cable screening and grounding  | If screened cable is required, we recommend connecting the cable<br>screen on both ends to ground potential. In the sensor, the screen<br>must be connected directly to the internal ground terminal. The<br>ground terminal on the outside of the housing must be connected to<br>the ground potential (low impedance). |
| Æx>  | With Ex systems, the grounding is carried out according to the instal-<br>lation regulations.  |
|  | In electroplating and CCP systems (cathodic corrosion protection) it<br>must be taken into account that significant potential differences exist.<br>This can lead to unacceptably high shield currents if the cable shield<br>is grounded at both ends.  |

Connecting to power supply

| MAN 1000244889 EN Version: 24.10.2016<br>Released   freigeogenetic 24.10.2016<br>The second secon | <b>Information:</b><br>The metallic parts of the instrument (process fitting, transmitter, concentric tube, etc.) are conductively connected with the inner and outer ground terminal on the housing. This connection exists either directly via connecting metallic parts or, in case of instruments with external electronics, via the screen of the special connection cable.<br>You can find specifications on the potential connections inside the instrument in chapter " <i>Technical data</i> ". |  |  |
|--|--|--|--|
| (ue  | 5.2 Connecting   |  |  |
| Cennection technology  | The voltage supply and signal output are connected via the spring-<br>loaded terminals in the housing.   |  |  |
| l frei   | Connection to the display and adjustment module or to the interface adapter is carried out via contact pins in the housing.  |  |  |
| atus: RL (release  | <b>Information:</b><br>The terminal block is pluggable and can be removed from the electronics. To do this, lift the terminal block with a small screwdriver and pull it out. When reinserting the terminal block, you should hear it snap in.   |  |  |
| ர்<br>Connection procedure   | Proceed as follows:  |  |  |
|  | 1. Unscrew the housing cover   |  |  |
| Versi  | 2. If a display and adjustment module is installed, remove it by turn-<br>ing it slightly to the left.   |  |  |
| Z<br>Ш   | 3. Loosen compression nut of the cable entry gland   |  |  |
| 4889   | <ol> <li>Remove approx. 10 cm (4 in) of the cable mantle, strip approx.</li> <li>1 cm (0.4 in) of insulation from the ends of the individual wires</li> </ol>  |  |  |
| 024  | 5. Insert the cable into the sensor through the cable entry  |  |  |
| 100  |  |  |  |
| MAM  |  |  |  |

Fig. 10: Connection steps 5 and 6 - Single chamber housing

6. Insert the wire ends into the terminals according to the wiring plan

### Information:

Solid cores as well as flexible cores with wire end sleeves are inserted directly into the terminal openings. In case of flexible cores without end sleeves, press the terminal from above with a small screwdriver, the terminal opening is then free. When the screwdriver is released, the terminal closes again.

You can find further information on the max. wire cross-section under "Technical data/Electromechanical data"

- 7. Check the hold of the wires in the terminals by lightly pulling on them
- 8. Connect the screen to the internal ground terminal, connect the outer ground terminal to potential equalisation
- 9. Tighten the compression nut of the cable entry gland. The seal ring must completely encircle the cable
- 10. Reinsert the display and adjustment module, if one was installed
- 11. Screw the housing cover back on

The electrical connection is finished.

### 5.3 Wiring plan, single chamber housing

The following illustration applies to the non-Ex, Ex-ia and Ex-d ver-

Fig. 11: Electronics and terminal compartment, single chamber housing

- 1 Voltage supply, signal output
- 2 For display and adjustment module or interface adapter
- 3 For external display and adjustment unit
- 4 Ground terminal for connection of the cable screen

### 5.4 Switch-on phase

After connecting the instrument to power supply or after a voltage recurrence, the instrument carries out a self-check for approx. 30 s:

- Internal check of the electronics
- Indication of the instrument type, hardware and software version, measurement loop name on the display or PC
- Indication of the status message "F 105 Determine measured value" on the display or PC
- The output signal jumps to the set fault current

As soon as a plausible measured value is found, the corresponding current is outputted to the signal cable. The value corresponds to the actual level as well as the settings already carried out, e.g. factory setting.

## 6 Set up with the display and adjustment module

### 6.1 Insert display and adjustment module

The display and adjustment module can be inserted into the sensor and removed again at any time. You can choose any one of four different positions - each displaced by 90°. It is not necessary to interrupt the power supply.

Proceed as follows:

- 1. Unscrew the housing cover
- 2. Place the display and adjustment module in the requested position onto the electronics and turn to the right until it snaps in
- 3. Screw housing cover with inspection window tightly back on

Removal is carried out in reverse order.

The display and adjustment module is powered by the sensor, an additional connection is not necessary.

Fig. 12: Insertion of the display and adjustment module with single chamber housing

### Note:

If you intend to retrofit the instrument with a display and adjustment module for continuous measured value indication, a higher cover with an inspection glass is required.

### 6.2 Adjustment system

In the first view, the selected measured value is displayed in large digits. In the second view, the selected measured value and a corresponding bar graph presentation are displayed. In the third view, the selected measured value as well as a second selectable value, e.g. the temperature, are displayed. Sensor 1866 1866 mm mm Sensor Sensor 6.3 Parameter adjustment - Quick setup To quickly and easily adapt the sensor to the application, select the menu item "Quick setup" in the start graphic on the display and EN Version: adjustment module. Quick setup xtended adjustment щ General information NPW You can find "Extended adjustment" in the next sub-chapter. Measurement loop name In the first menu item you can assign a suitable measurement loop name. You can enter a name with max. 19 characters.

### Type of medium

In the next menu item you can see which type of medium the instrument is suitable for. If your instrument is only suitable for a certain medium, this menu item is not visible.

### Application

TANK Ø4

In this menu item, you can select the application. You can choose between level measurement and interface measurement. You can also choose between measurement in a vessel or in a bypass or standpipe.

| Type of medium |   |
|----------------|---|
| Liquid         | ▼ |
|                |   |

Level measurement

### Medium - dielectric constant

In this menu item, you can define the type of medium (product).

### Max. adjustment

In this menu item, you can enter the max. adjustment for the level.

Enter the appropriate distance value in m (corresponding to the percentage value) for the full vessel. The distance refers to the sensor reference plane (seal surface of the process fitting). Keep in mind that the max. level must lie below the dead band.

#### Min. adjustment

In this menu item, you can enter the min. adjustment for the level.

Enter the suitable distance value in m for the empty vessel (e.g. distance from the flange to the probe end) corresponding to the percentage value. The distance refers tot he sensor reference plane (seal surface of the process fitting).

In this menu item, you can define the type of medium (product).

#### Max. adjustment

Dielectric constant - upper medium

In this menu item, you can enter the max. adjustment for the level.

Enter the appropriate distance value in m (corresponding to the percentage value) for the full vessel. The distance refers to the sensor reference plane (seal surface of the process fitting). Keep in mind that the max. level must lie below the dead band.

### Min. adjustment

In this menu item, you can enter the min. adjustment for the level.

Enter the suitable distance value in m for the empty vessel (e.g. distance from the flange to the probe end) corresponding to the percentage value. The distance refers tot he sensor reference plane (seal surface of the process fitting).

### Max. adjustment - Interface

Carry out the max. adjustment for the interface.

To do this, enter the percentage value and the suitable distance value in m for the full vessel.

### Min. adjustment - Interface

Carry out the min. adjustment for the interface.

To do this, enter the percentage value and the suitable distance value in m for the empty vessel.

46223-EN-140605

| L | II                  | 1       | e |

| 1 | 5                   |         |   |
| i | 2                   | i       |   |
|   | 1000244889          |         |   |
|   |                     |         |   |

### Linearization Linearization

A linearization is necessary for all vessels in which the vessel volume does not increase linearly with the level - e.g. a horizontal cylindrical or spherical tank, when the indication or output of the volume is required. Corresponding linearization curves are preprogrammed for these vessels. They represent the correlation between the level percentage and vessel volume.

The linearization applies for the measured value indication and the current output. By activating the suitable curve, the percentage vessel volume is displayed correctly.

### False signal suppression

High sockets and internal vessel installations cause interfering reflections and can influence the measurement.

A false signal suppression detects, marks and saves these false signals so that they are no longer taken into account for the level and interface measurement. We generally recommend carrying out a false signal suppression to achieve the best possible accuracy. This should be done with the lowest possible level so that all potential interfering reflections can be detected.

Enter the actual distance from the sensor to the product surface.

All interfering signals in this section are detected by the sensor and stored.

The instrument carries out an automatic false signal suppression as soon as the probe is uncovered. The false signal suppression is always updated.

| Linearization | False signal suppression |
|---------------|--------------------------|
| Linear 💌      | Change?                  |

### 6.4 Parameter adjustment - Extended adjustment

For technically demanding measuring points, you can carry out extended settings in "*Extended adjustment*".

### Main menu

The main menu is divided into five sections with the following functions:

**Setup:** Settings, e.g. measurement loop name, medium, vessel, adjustment, signal output, device unit, false signal suppression, linearization curve

Display: Settings, e.g., for language, measured value display, lighting

us: RL (released | freigegeben) printed: 24.10.2016

Diagnosis: Information, e.g. on instrument status, pointer, measurement reliability, simulation, echo curve

Additional adjustments: Reset, date/time, reset, copy function

Info: Instrument name, hardware and software version, date of manufacture, instrument features

#### Note:

For optimum adjustment of the measuring point, the individual submenu items in the main menu item "*Setup*" should be selected one after the other and provided with the correct parameters. If possible, go through the items in the given sequence.

The procedure is described below.

The following submenu points are available:

| Setup                 | Setup          |
|-----------------------|----------------|
| Measurement loop name | Damping        |
| Units                 | Linearization  |
| Probe length          | Scaling level  |
| Application           | Current output |
| Adjustment level      | HART variables |
| ×                     | <b>T</b>       |

| serup                 |
|-----------------------|
| Min. adjustment level |
| Damping               |
| Linearization         |
| Scaling level 1       |
| Scaling level 2       |

The submenu points described below.

Here you can assign a suitable measurement loop name. Push the "OK" key to start the processing. With the "+" key you change the sign and with the "->" key you jump to the next position.

You can enter names with max. 19 characters. The character set comprises:

- Capital letters from A ... Z
- Numbers from 0 ... 9
- Special characters + / \_ blanks

| Measur | enent | loop | na |
|--------|-------|------|----|
| TANK   | 04    |      |    |
|        |       |      |    |

Setup - Units

Setup - Measurement

loop name

MAN 1000244889 EN Version:

In this menu item you select the distance unit and the temperature unit.

| •        |
|----------|
|          |
| <b>•</b> |
|          |

With the distance units you can choose between m, mm and ft and with the temperature units betwenn °C, °F and K.

Setup - Probe length

In this menu item you can enter the probe length or have the length determined automatically by the sensor system.

When choosing "Yes", then the probe length will be determined automatically. When choosing "No", you can enter the probe length manually.

uids

tures

Chemical mix-

Hydrocarbons

This menu item is only available, if you have chosen interface meas-

urement under the menu item "Application". In this menu item you can enter if there is a superimposed gas phase in your application.

Chlorobenzene, nitro lacquer, aniline,

isocyanate, chloroform

Solvents, oils, liquid gas

phase

Setup - Application - Gas

#### Setup - Min. adjustment Level

In this menu item you can enter the min. adjustment for the level. With interface measurement this is the minimum total level.

Adjust the requested percentage value with [+] and store with [OK].

Enter the suitable distance value in m for the empty vessel (e.g. distance from the flange to the probe end) corresponding to the percentage value. The distance refers tot he sensor reference plane (seal surface of the process fitting).

(reigegeben) printed: 24.10.2016 and I freigegeben) printed: 24.10.2016 and Particle Statement - Interface

(rel

MAN 1000244889 EN Version: - Status: RL

This menu item is only available if you have selected interface measurement under the menu item "Application".

You can accept the adjustment of the level measurement also for the interface measurement. If you select "Yes", the current setting will be displayed.

If you have selected "No", you can enter the adjustment for the interface separately. Enter the requested percentage value.

For the full vessel, enter the distance value in m matching the percentage value.

Setup - Min. adjustment -This menu item is only available if you have selected interface meas-Interface urement under the menu item "Application". If you have selected "Yes" in the previous menu item (accept adjustment of the level measurement), the current setting will be displayed.

If you have selected "No", you can enter the adjustment for the interface measurement separately.

46223-EN-140605

In the following, you have to enter the values for your vessel, for example the vessel height and the socket correction.

For non-linear vessel forms, enter the vessel height und the socket correction.

For the vessel height, you have to enter the total height of the vessel.

For the socket correction you have to enter the height of the socket above the upper edge of the vessel. If the socket is lower than the upper edge of the vessel, this value can also be negative.

Fig. 14: Vessel height und socket correction value

- D Vessel height
- +h Positive socket correction value
- -h Negative socket correction value

Setup - Scaling Level

MAN 1000244889 EN Version: - Status: RL (released | freigegeben) printed: 24.10.2016

Since scaling is very extensive, scaling of the level value was divided into two menu items.

Scaling level Scaling level (1) Scaling level 2

In menu item "*Level 1*" you define the scaling variable and the scaling unit for the level value on the display, e.g. volume in I.

| Setup - Scaling Level 2   | Since scaling is very extensive, scaling of the level value was divided into two menu items.   |
|---|--|
| لللل المحافظ المحاف   | Scaling level (1)<br>Scaling leve  |
| Setup - Scaling Interface   | Since scaling is very extensive, scaling of the interface value was divided into two menu items.   |
| Ketsion: - Scaling Interface<br>Statins: H<br>- Statins: H<br>- Statins:<br>H<br>- St | In menu item "Interface 1" you define the scaling size and the scaling<br>unit for the interface value on the display, e.g. volume in I.<br>You can accept the scaling of the level measurement also for the<br>interface measurement. If you select "Yes", the current setting is<br>displayed.<br>Scaling interface<br>Scaling interface (1)<br>Scaling interface (2)  |
| NAM<br>Setup - Scaling Interface<br>(5)   | If you have selected "No", you can enter the scaling for the interface separately.          Scaling variable         Volume         I         Others         T   |
| Setup - Scaling Interface<br>(2)  | In menu item "Interface (2)" you define the scaling format on the display and the scaling of the interface measured value for 0 % and 100 %.<br>Scaling interface<br>Scaling interface (1)<br>Scaling format<br>Scaling format<br>Scaling format<br>Scaling format<br>Scaling 100 %<br>Scaling 100 %<br>Scaling 100 %<br>Scaling 0 %<br>Scaling 100 %<br>Scaling 0 %<br>Scaling 0 %<br>Scaling 0 %<br>Scaling 100 %<br>Scaling |
| Setup - Current output<br>Size  | In menu item" <i>Current output, size</i> " you determine which measured value the current output refers to.   |

current output separately. In menu item"*Current output 2*" you specify which measured value the additional current output refers to.

The procedure corresponds to the previous settings of the standard current output. See "Setup - Current output".

Enter the actual distance from the sensor to the product surface.

All interfering signals in this section are detected by the sensor and stored.

### • Note: Check

Check the distance to the product surface, because if an incorrect (too large) value is entered, the existing level will be saved as a false echo. The filling level would then no longer be detectable in this area.

If a false signal suppression has already been created in the sensor, the following menu window appears when selecting "*False signal suppression*":

The instrument carries out an automatic false signal suppression as soon as the probe is uncovered. The false signal suppression is always updated.

The menu item "*Delete*" is used to completely delete an already created false signal suppression. This is useful if the saved false signal suppression no longer matches the metrological conditions in the vessel.

∠ ⊔ Lock/release setup - Adju‰tment

Version: - Status: RL (released | freigegeben) printed: 24 10.2016

MAN 1000244

In the menu item "*Lock/unlock adjustment*", you can protect the sensor parameters against unauthorized modification. The PIN is activated/deactivated permanently.

The following adjustment functions are possible without entering the PIN:

- Select menu items and show data
- Read data from the sensor into the display and adjustment module.

# Caution:

With active PIN, adjustment via PACTware/DTM as well as other systems is also blocked.

You can change the PIN number under "Additional adjustments - PIN".

Display

In the main menu point "*Display*", the individual submenu points should be selected subsequently and provided with the correct parameters to ensure the optimum adjustment of the display options. The procedure is described in the following.

The following submenu points are available:

During simulation, the simulated value is outputted as 4 ... 20 mA current value and digital HART signal.

Push the [ESC] key to deactivate the simulation.

| brinted: 2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>2016<br>20 | key has been pressed.<br>With the menu item "So<br>the time of setup. Additional adjustments -Copy instrument settings

The instrument settings are copied with this function. The following functions are available:

- Read from sensor: Read data from sensor and store into the display and adjustment module
- Write into sensor: Store data from the display and adjustment module back to the sensor

The following data or settings for adjustment of the display and adjustment module are saved:

- All data of the menu "Setup" and "Display"
- In the menu "Additional adjustments" the items "Reset, Date/Time"
- Special parameters

The copied data are permanently saved in an EEPROM memory in the display and adjustment module and remain there even in case of power failure. From there, they can be written into one or more sensors or kept as backup for a possible electronics exchange.

# Note:

Before the data are stored in the sensor, a check is carried out to determine if the data fit the sensor. If the data do not fit, a fault signal is triggered or the function is blocked. When data are being written into the sensor, the display shows which instrument type the data originate from and which TAG-no. this sensor had.

In this menu item you can select the type and size of your probe from a list of all possible probes. This is necessary to adapt the electronics optimally to the probe.

In this menu item you gain access to the protected area where you can enter special parameters. In exceptional cases, individual parameters can be modified in order to adapt the sensor to special requirements.

Change the settings of the special parameters only after having contacted our service staff.

MAN

The sensor offers the HART modes "Analogue current output" and "Fix current (4 mA)". In this menu item you determine the HART mode and enter the address with Multidrop mode.

In the mode "Fixed current output" up to 63 sensors can be operated on one two-wire cable (Multidrop operation). An address between 0 and 63 must be assigned to each sensor.

If you select the function "Analogue current output" and also enter an address number, you can output a 4 ... 20 mA signal in Multidrop mode.

Status: RL (released | freigegeben) printed: 24.10.2016

With the mode "Fixed current (4 mA)" a fixed 4 mA signal is outputted

|  | independently of the actual level.   |  |  |

6.5 Saving the parameter adjustment data

We recommended noting the adjusted data, e.g. in this operating instructions manual, and archiving them afterwards. They are thus available for multiple use or service purposes.

If the instrument is equipped with a display and adjustment module, the data in the sensor can be saved in the display and adjustment module. The procedure is described in the operating instructions manual "*Display and adjustment module*" in the menu item "*Copy sensor data*". The data remain there permanently even if the sensor power supply fails.

The following data or settings for adjustment of the display and adjustment module are saved:

- All data of the menu "Setup" and "Display"
- In the menu "Additional adjustments" the items "Sensor-specific units, temperature unit and linearization"
- The values of the user programmable linearization curve

The function can also be used to transfer settings from one instrument to another instrument of the same type. If it is necessary to exchange a sensor, the display and adjustment module is inserted into the replacement instrument and the data are likewise written into the sensor via the menu item "*Copy sensor data*".

# 7 Setup with PACTware

# 7.1 Connect the PC

Fig. 15: Connecting the PC via HART to the signal cable

- 1 Sensor
- 2 HART resistance 250  $\Omega$  (optional depending on processing)
- 3 Connection cable with 2 mm pins and terminals
- 4 Processing system/PLC/Voltage supply

# 7.2 Parameter adjustment with PACTware

For parameter adjustment of the sensor via a Windows PC, the configuration software PACTware and a suitable instrument driver (DTM) according to FDT standard are required. The available DTMs are compiled on a DVD. The DTMs can also be integrated into other frame applications according to FDT standard.

# Note:

To ensure that all instrument functions are supported, you should always use the latest DTM. Furthermore, not all described functions are included in older firmware versions. You can download the latest instrument software from our homepage. A description of the update procedure is also available in the Internet.

The further setup steps are described in the online help of PACTware and the DTMs.

### 7.3 Set up with the quick setup

General information

The guick setup is another option for parameter adjustment of the sensor. It allows fast, convenient adjustment of the most important parameters to adapt the sensor quickly to standard applications. To use it, select the function "Quick setup" in the start screen.

|                       | 188 / 8189 HART<br>DR sensor for continuous level measurement with 4 20 mA/HART interfa<br>ensor     |  |

Fig. 17: Select quick setup

- 1 Quick setup
- 2 Extended adjustment
- 3 Maintenance

### Quick setup

With quick setup you can carry out the parameter adjustment of LEVEL TRANSMITTER 8189 for your application in just a few simple steps. The assistant-driven adjustment includes the basic settings for simple, reliable setup and commissioning.

# Information: If the function

If the function is inactive, then possibly no instrument is connected. Check the connection to the instrument.

### Extended adjustment

With the extended adjustment, you carry out the parameter adjustment for the instrument via the clear menu structure in the DTM (Device Type Manager). This enables additional and special settings over and above those offered by quick setup.

### Maintenance

Under the menu item "*Maintenance*" you get comprehensive and important support for servicing and maintenance. You can call up diagnostic functions and carry out an electronics exchange or a software update.

Start quick setup

Click to the button "*Quick setup*", to start the assistant-driven adjustment for a simplified and reliable setup.

| Step 1<br>Instrument configuration                                    | <b>Device name</b><br>Here, you can find the instrument name. You cannot change this line<br>because the instrument name is unmodifiably saved in the instrument.  |
|---|--|
| nted: 24.10.2   | Serial number<br>Here, you can find the serial number of your instrument. You cannot<br>change this line because the serial number is unmodifiably saved in<br>the instrument.   |

| Step 2<br>Application   | <b>Type of medium</b><br>Here you can see which type of medium your instrument is suitable<br>for. If this function is inactive, the medium type your instrument is suit-<br>able for was already preset.  |
| •   | Information:   |

### Information:

1

In special cases you can change the type of medium. This setting can be changed under "*Extended adjustment*".

### Application

In this field you can select the application you want to use your instrument for. You have the following selection options:

- Level in the vessel
- Level in the bypass/standpipe
- Interface in the vessel
- Interface in the bypass/standpipe
- Demonstration mode

*Level measurement:* If you select "*Level*", you can select the properties of the medium in another field.

46223-EN-140605

Interface measurement: If you select "Interface", the instrument needs more information, such as the distance to the interface, the dielectric constant of the upper medium or whether or not there is a superimposed gas phase.

*Demonstration mode:* This mode is only suitable for test and demonstration purposes. In this mode, the sensor ignores all parameters and reacts immediately to all measured value changes within the measuring range.

# **Application - Level measurement**

The level measurement refers to the product surface which is the limit to the gas phase.

As a standard feature, the instrument is set to level measurement of liquids. You can switch over the instrument to the measurement of bulk solids.

- Liquids
  - Solvents, oils, LPG dielectric constant < 3
  - Chemical mixtures dielectric constant 3 ... 10
  - Water-based dielectric constant > 10
- Bulk solids
  - Dusts, wood chips dielectric constant < 1.5
  - Granules, dusts, powders dielectric constant 1.5 ... 3
  - Cereals, flour dielectric constant > 3

# **Application - Interface measurement**

The interface measurement refers to the phase limit between two liquids. The total level is also available as a measured value.

- Superimposed gas phase present
  - Check if there is a superimposed gas phase in the vessel. This
    is always the case if the total level never touches the process
    fitting.
- Properties
  - Here you can enter the dielectric constant of the upper medium
  - As an alternative you can enter the distance to the interface

Step 3 Adjustment

Adjustment for the level measurement

If you have selected level measurement in the previous menu, then you can enter the values for the min. and max. adjustment. The value to be entered refers to the distance from the sealing surface of the process fitting (sensor reference plane) to the surface of the product.

# Adjustment for the level and interface measurement

If you have selected interface measurement in the previous menu, then you can enter the values for the min. and max. adjustment of level and interface or accept the values of the level measurement. The entered value refers to the distance from the sealing surface of the process fitting (sensor reference plane) to the total level or interface.

Linearization is required if the measured value should be outputted in proportion to the volume and not the level. The linearization acts

Step 4 Linearization

46223-EN-140605

identically on the level and the interface measurement. You can find further linearization types in the extended adjustment.

If you have a non-linear vessel, you can select here the respective linearization curve.

- Linear
- Spherical tank
- Horizontal cylindrical tank

You must enter the following vessel dimensions with non-linear conditions:

- Height of the socket h
- Vessel height D

eases 24.10.2016 24.10.2016 2 24.10.2016 2 24.10.2016 2 24.10.2016 2 24.10.2016

Sensor optimization

Step 6

Ē

MAN 1000244889 EN Version: - Status:

In this window you can adjust the output signal. When the function is inactive, you can change the settings via the "*Extended adjustment*".

These settings allow you to optimize the sensor. With them you can compare a sounded distance with the indicated value and correct it, if necessary.

Probe immersed in the liquid (covered) Select whether or not the probe is immersed in the medium.

# Measured distance to the medium

If the probe is immersed in the medium, you can enter here the measured distance to the medium.

### **Displayed distance correct?**

Is the displayed distance value correct? If you have the possibility, you can enter here the sounded distance to the medium.

### False signal suppression

With this function you can carry out the automatic false signal suppression. We recommend carrying out false signal suppression in any case.

Step 7When the setup of the instrument is finished, additional settings can<br/>be made. These are various backups and the locking of the instru-<br/>ment against unauthorised or inadvertent adjustment.

Prepare a backup file of the instrument parameter adjustment?

For backup purposes, the current parameter adjustment of the instrument is stored in a file. You can use this file later on to restore the instrument parameter adjustment. The complete data set is downloaded from the device. This procedure can last several minutes.

# Create instrument documentation?

This function is used to print or create a PDF file of the current parameter adjustment. To read the PDF file, you need a suitable program (for example Acrobat Reader). To print or create the PDF file, all data are downloaded from the device. For this function, the full version of the DTM Collection is required. This procedure can last several minutes.

# Store echo curve of the setup in the sensor?

Have you completed the initial setup of the instrument? In such case, we recommend storing the current signal conditions in the device for later instrument tests and diagnostics.

# Lock adjustment with PIN after setting?

The instrument is locked with the current PIN. A parameter adjustment is possible only after the PIN is entered again.

# 7.4 Parameter adjustment with PACTware

For parameter adjustment of the sensor via a Windows PC, the configuration software PACTware and a suitable instrument driver (DTM) according to FDT standard are required. The available DTMs are compiled on a DVD. The DTMs can also be integrated into other frame applications according to FDT standard.

### Note:

1

To ensure that all instrument functions are supported, you should always use the latest DTM. Furthermore, not all described functions are included in older firmware versions. You can download the latest instrument software from our homepage. A description of the update procedure is also available in the Internet.

The further setup steps are described in the online help of PACTware and the DTMs.

Fig. 18: Example of a DTM view

Device DTMs

The device DTM includes an assistant for simple project configuration simplifying the adjustment considerably. You can save and print your project documentation as well as import and export projects.

MAN 1000244889 EN Version: - Status: RL (released | freigegeden) printed: 24.10.2016

You can also save measured value and echo curves in the DTM. Furthermore a tank calculation program as well as a multiviewer for indication and analysis of the saved measured value and echo curves are available.

The supplied DVD includes the respective device DTM. However, you can also download the DTM from our homepage <u>www.buerkert.com</u>.

# 7.5 Saving the parameter adjustment data

We recommend documenting or saving the parameter adjustment data via PACTware. That way the data are available for multiple use or service purposes.

# 8 Set up with other systems

# 8.1 DD adjustment programs

Device descriptions as Enhanced Device Description (EDD) are available for DD adjustment programs such as, for example, AMS<sup>™</sup> and PDM.

# 8.2 Field Communicator 375, 475

Device descriptions for the instrument are available as EDD for parameter adjustment with the Field Communicator 375 or 475.

For the integration of the EDD in the Field Communicator 375 or 475, the software "Easy Upgrade Utility" is required which is available from the manufacturer. This software is updated via the Internet and new EDDs are automatically taken over into the device catalogue of this software after they are released by the manufacturer. They can then be transferred to a Field Communicator.

# 9 Diagnostics and service

# 9.1 Maintenance

If the device is used correctly, no maintenance is required in normal operation.

# 9.2 Diagnosis memory

The instrument has several memories which are available for diagnosis purposes. The data remain even with voltage interruption.

1000244889 EN Version: - Status: RL (released | freigeneer in printed: 24.10.2016 paragraphing p

Event memory

Up to 100,000 measured values can be stored in the sensor in a ring memory. Each entry contains date/time as well as the respective measured value. Storable values are for example:

- Distance
- Filling height
- Percentage value
- Lin. percent
- Scaled
- Current value
- Meas. reliability
- Electronics temperature

When the instrument is shipped, the measured value memory is active and stores distance, measurement certainty and electronics temperature every 3 minutes.

In "Extended adjustment" you can select the respective measured values.

The requested values and recording conditions are set via a PC with PACTware/DTM or the control system with EDD. Data are thus read out and also reset.

Up to 500 events are automatically stored with a time stamp in the sensor (non-deletable). Each entry contains date/time, event type, event description and value. Event types are for example:

- Modification of a parameter
- Switch-on and switch-off times
- Status messages (according to NE 107)
- Error messages (according to NE 107)

The data are read out via a PC with PACTware/DTM or the control system with EDD.

# **Echo curve memory** The echo curves are stored with date and time and the corresponding echo data. The memory is divided into two sections:

Echo curve of the setup: This is used as reference echo curve for the measurement conditions during setup. Changes in the measurement conditions during operation or buildup on the sensor can thus be recognized. The echo curve of the setup is stored via:

- PC with PACTware/DTM
- Control system with EDD

Display and adjustment module

**Further echo curves:** Up to 10 echo curves can be stored in a ring buffer in this memory section. Further echo curves are stored via:

- PC with PACTware/DTM
- Control system with EDD
- Display and adjustment module

# 9.3 Status messages

The instrument features self-monitoring and diagnostics according to NE 107 and VDI/VDE 2650. In addition to the status messages in the following tables there are more detailed error messages available under the menu item "*Diagnostics*" via the display and adjustment module, PACTware/DTM and EDD.

The status messages are divided into the following categories:

- Failure
- Function check
- Out of specification
- Maintenance requirement

and explained by pictographs:

Fig. 19: Pictographs of the status messages

- 1 Failure red
- 2 Out of specification yellow
- 3 Function check orange
- 4 Maintenance blue

Failure: Due to a malfunction in the instrument, a failure message is outputted.

This status message is always active. It cannot be deactivated by the user.

**Function check:** The instrument is in operation, the measured value is temporarily invalid (for example during simulation).

This status message is inactive by default. It can be activated by the user via PACTware/DTM or EDD.

Out of specification: The measured value is unstable because the instrument specification is exceeded (e.g. electronics temperature).

This status message is inactive by default. It can be activated by the user via PACTware/DTM or EDD.

**Maintenance:** Due to external influences, the instrument function is limited. The measurement is affected, but the measured value is

MAN 1000244889 EN Version: - Status: RL (released | freigegeben) printed: 2016

still valid. Plan in maintenance for the instrument because a failure is expected in the near future (e.g. due to buildup).

This status message is inactive by default. It can be activated by the user via PACTware/DTM or EDD.

The following table shows the error codes in the status message "*Failure*" and gives information on the reason and rectification. Keep in mind that some information is only valid with four-wire instruments.

| Code   | Cause  | Rectification   |
|--|--|---|

### **Rectify faults** 9.4

The operator of the system is responsible for taking suitable measures to rectify faults.

The first measures are:

- Evaluation of fault messages, for example via the display and • adjustment module
- Checking the output signal
- Treatment of measurement errors

Further comprehensive diagnostics options are available with a PC with PACTware and the suitable DTM. In many cases, the reasons can be determined in this way and faults rectified.

Connect a multimeter in the suitable measuring range according to the wiring plan. The following table describes possible errors in the current signal and helps to remove them:

| Error  | Cause   | Rectification  |
|--|---|--|
| 4 20 mA signal not stable  | <ul> <li>Fluctuations of<br/>the measured<br/>variable</li> </ul>   | <ul> <li>Set damping according to the<br/>instrument via the display and<br/>adjustment module or PACTware/<br/>DTM</li> </ul> |
| 4 20 mA signal missing   | <ul> <li>Electrical connection faulty</li> <li>Check connection according to chapter "Connection steps" and if necessary, correct according to chapter "Wiring plan"</li> </ul> |  |
|  | <ul> <li>Voltage supply<br/>missing</li> </ul>  | <ul> <li>Check cables for breaks; repair if<br/>necessary</li> </ul>   |
|  | <ul> <li>Operating volt-<br/>age too low or<br/>load resistance<br/>too high</li> </ul>   | <ul> <li>Check, adapt if necessary</li> </ul>  |
| Current sig-<br>nal greater than<br>22 mA or less<br>than 3.6 mA | <ul> <li>Electronics<br/>module in the<br/>sensor defec-<br/>tive</li> </ul>  | <ul> <li>Exchange the instrument or send it<br/>in for repair</li> </ul>   |

### Treatment of measurement errors

46223-EN-140605

The below tables show typical examples for application-relevant measurement errors. There are two measurement errors:

Constant level

Status: RL (released | freigegeben) printed: 24.10.2016

- Filling
- Emptying

The images in column "*Error pattern*" show the real level with a broken line and the level displayed by the sensor as a continuous line.

Fig. 20: The broken line 1 shows the real level, the continuous line 2 shows the level displayed by the sensor

# Note:

- Wherever the sensor displays a constant value, the reason could also be the fault setting of the current output to "Hold value"
- In case of a too low level indication, the reason could be a line resistance that is too high

# Measurement error with constant level

| Refult description                         | Error pattern | Cause  | Rectification   |

| Heasured value re-<br>mains reproducible<br>Kone position during<br>emptying    | Page 10 Page 1 | <ul> <li>Stored false signals in this<br/>position are larger than the<br/>level echo</li> </ul> | <ul> <li>Delete false signal memory</li> <li>Carry out a new false signal suppression</li> </ul>  |

# Reaction after fault rectification

Depending on the reason for the fault and the measures taken, the steps described in chapter "*Setup*" must be carried out again or must be checked for plausibility and completeness.

# 9.5 Exchanging the electronics module

If the electronics module is defective, it can be replaced by the user.

In Ex applications, only instruments and electronics modules with appropriate Ex approval may be used.

If there is no electronics module available on site, the electronics module can be ordered through the agency serving you. The electronics modules are adapted to the respective sensor and differ in signal output or voltage supply.

The new electronics module must be loaded with the default settings of the sensor. These are the options:

- In the factory
- Or on site by the user

In both cases, the serial number of the sensor is needed. The serial numbers are stated on the type label of the instrument, on the inside of the housing as well as on the delivery note.

When loading on site, first of all the order data must be downloaded from the Internet (see operating instructions manual "*Electronics module*").

# Caution:

All user-specific settings must be entered again. Hence, you have to carry out a new setup after the electronics exchange.

If you have stored the data of the parameter adjustment during the first setup of the sensor, you can transfer these to the replacement electronics module. A new setup is no more necessary.

# 9.6 Exchanging the rod

The rod (meas. part) of the probe can be shortened, if necessary. To loosen the meas. rod you need a fork spanner with spanner width 10.

# Caution:

Remember that the polished rod of the food version is very sensitive to damage and scratching. Use special tools in order to avoid damaging the surface.

- 1. Loosen the rod by applying a fork spanner to the flat surfaces (SW 10), provide counterforce manually on the process fitting
- 2. Twist off the loosened measuring rod manually
- 3. Shift the attached new seal ring onto the thread.
- Screw the new rod carefully by hand to the thread on the process fitting.
- 5. Exert counterforce manually and tighten the rod on the flat surfaces with a torque of 6 Nm (4.43 lbf ft).

(released | freigegeben) printed: 24.10.2016 Exchanging the rod MAN 1000244889 EN Version: - Status:

Fig. 29: Exchanging the measuring rod

1 Seal ring

# Information:

Please maintain the specified torque so that the max. tensile strength remains.

6. Enter new probe length and if necessary the new probe type and then carry out a fresh adjustment (see "Setup procedure, Carrying out min. adjustment - Carrying out max. adjustment").

# 9.7 Software update

The following components are required to update the sensor software:

- Sensor
- Voltage supply
- HART modem
- PC with PACTware
- Current sensor software as file

You can find the actual sensor software as well as detailed information of the procedure in the download area on our homepage: <u>www.buerkert.com</u>.

You can find information about the installation in the download file.

### Caution:

Instruments with approvals can be bound to certain software versions. Therefore make sure that the approval is still effective after a software update is carried out.

You can find detailed information in the download area on our homepage: <u>www.buerkert.com</u>.

# 9.8 How to proceed if a repair is needed

If it is necessary to repair the instrument, please contact the agency serving you.

# 10 Dismounting

# 10.1 Dismounting steps

# Warning:

Before dismounting, be aware of dangerous process conditions such as e.g. pressure in the vessel or pipeline, high temperatures, corrosive or toxic products etc.

Take note of chapters "*Mounting*" and "*Connecting to power supply*" and carry out the listed steps in reverse order.

# 10.2 Disposal

The instrument consists of materials which can be recycled by specialised recycling companies. We use recyclable materials and have designed the parts to be easily separable.

Correct disposal avoids negative effects on humans and the environment and ensures recycling of useful raw materials.

Materials: see chapter "Technical data"

If you have no way to dispose of the old instrument properly, please contact us concerning return and disposal.

# WEEE directive 2002/96/EG

This instrument is not subject to the WEEE directive 2002/96/EG and the respective national laws. Pass the instrument directly on to a specialised recycling company and do not use the municipal collecting points. These may be used only for privately used products according to the WEEE directive.

Typical deviation - Level measurement<sup>5)6)</sup> See following diagrams

<sup>2)</sup> The output values can be assigned individually

- <sup>3)</sup> The indication values can be assigned individually
- <sup>4)</sup> With interface measurement = 2.0
- <sup>5)</sup> Depending on the installation conditions, there can be deviations which can be rectified with an adaptation of the adjustment or a change of the measured value offset in the DTM service mode

<sup>6)</sup> The dead bands can be optimizes by a false signal suppression.

# Variables influencing measurement accuracy

# Specifications for the digital measured value

Temperature drift - Digital output

±3 mm/10 K relating to the max. measuring range or max. 10 mm (0.394 in)

Additional deviation through electromag- < ±10 mm (< ±0.394 in) netic interference acc. to EN 61326

#### Specifications apply also to the current output<sup>7</sup>)

Temperature drift - Current output ±0.03 %/10 K relating to the 16 mA span max. ±0.3 %

 $D_{ev}$  viation on the current output through  $< \pm 15 \,\mu A$ 

analogue/digital conversion

Agditional deviation through electromag-  $< \pm 150 \ \mu A$ netic interference acc. to EN 61326

negic interference acc

#### In $\overline{\overline{\mathbb{B}}}$ uence of the superimposed gas and pressure to the accuracy

The propagation speed of the radar impulses in gas or vapour above the medium is reduced by high pressure. This effect depends on the superimposed gas or vapour and is especially large at low temperatures.

The following table shows the resulting deviation for some typical gases and vapours. The specified values refer to the distance. Positive values mean that the measured distance is too large, negative values that the measured distance is too small.

| Gas phase   | Temperature   | Pressure          |                   |                   |  |  |  |  |  |  |  |  |  |
