

burkert

A rotork Brand

Fine Controls have been supplying process controls & instrumentation equipment since 1994, & now serves an ever expanding customer base, both in the UK & globally.

We offer a full range of valve & instrumentation products & services, with our product rangerepresenting leading technologies & brands:

Flow: Flow Meters & Transmitters, Flow Switches, Flow Control Valves & Batch Control Systems

Temperature: Temperature Probes & Thermowells, Temperature ransmitters, Temperature Regulators & Temperature Displays

Level: Level Transmitters & Switches

Pressure: Pressure Gauges & Transmitters, Precision & High Pressure Regulators & I-P Converters, Volume boosters.

Precision Pneumatics: Pressure Regulators, I-P Converters, Volume Boosters, Vacuum Regulators

Valves: Solenoid & Pneumatic Valves, Control Valves & Positioners, Actuated Ball, Globe or Diaphragm Valves & Isolation Valves

Services: Repair, Calibration, Panel Build, System Design & Commissioning

FAIRCHILD MODEL 200 PNEUMATIC VOLUME BOOSTER Installation, Operation and Maintenance Instructions

INSTALLATION

You can mount the Model 200 in any position without affecting its operation. Use the Mounting Bracket, 10311, to mount the booster to any flat surface. For more information, see Figure 2.

Arrows indicate the Inlet and Outlet ports on the booster. Tighten all connections securely. Avoid undersized fittings that will limit the flow through the booster. For more information, see Figure 1.

Clean all pipelines to remove dirt and scale before installation.

Apply a minimum amount of pipe compound to the male threads of the fitting only. **Do Not use teflon tape as a sealant.** Start with the third thread back and work away from the end of the fitting to avoid contaminating the booster. Install the booster in the air line.

NOTE:

Oil free air must be applied to the booster. Use a filter to remove dirt and entrained liquid in the air line ahead of the booster. If an air line lubricator is used, it MUST be located downstream of the booster to avoid interference with performance.

INSTALLATION

If you have the Model 200 with Increased Sensitivity Option (L), use the Mounting Bracket, 19682-1, to mount the booster to any flat surface. For more information, see Figure 4.

For more installation information, see page 1.

The Model 200 reproduces a pneumatic signal in a 1:1 ratio. Apply pressure to the signal chamber until the required downstream pressure is reached.

OPERATION

This booster is ideally suited for systems that require input isolation or increased forward flow capacity. For more information, see Figure 1 and Figure 3. To clean the Model 200, use the following steps:

- 1. Shut off system pressure to the booster to prevent air from escaping. It is not necessary to remove the booster from the air line.
- 2. Remove the six screws from the bottom of unit. For more information, see Figure 5.
- **3.** Remove the Valve Assembly. For more information, see Figure 5.
- 4. Wash the Valve Assembly with a solvent. Exercise care to prevent damage to diaphragms and valve facings. Avoid solvents such as acetone, carbon tetrachloride and trichlorethylene.
- 5. Replace the assembly carefully. Ensure that the Exhaust Vents in the Spacer Ring are clear. For more information, see Figure 5.

Troubleshooting

Table 1. Troubleshooting		
Problem	Source	Solution
When the signal is off, the valve does not close.	Valve seat	Check the valve seat.
	 Diaphragm Assembly 	 Ensure that the dia- phragm is not punctured.
Leakage / High Bleed	 Bonnet or Re- tainer Screws Relief Valve 	 Tighten the Bonnet or Retainer Screws
	 Supply Valve Supply Seat Diaphragm Assemblies 	 If contaminated, clean the source.
		 If damaged, install the service kit.

NOTE: If the standard maintenance procedure does not correct the problem, install the appropriate service kit.

Standard/Tapped Exhaust

• 12151-1 • 12151-4 (Increased Sensitivity) Non-relieving

• 12151-2 • 12151-5 (Increased Sensitivity) Viton
